PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in SQL, Python, Excel, Power BI, and Tableau, skilled at transforming raw data into actionable business insights. Proven ability to build end-to-end analytics pipelines, develop interactive dashboards, and deliver KPI reports that support stakeholder decision-making. Strong foundation in data cleaning, exploratory data analysis, business intelligence, and data validation. Eager to apply analytical problem-solving in data-intensive environments while collaborating with cross-functional teams to gather business requirements and drive data-informed outcomes.

EDUCATION

B.Tech in Artificial Intelligence and Data Science (2023 – 2027) | **CGPA: 8.66 / 10**

Panimalar Engineering College, Chennai

TECHNICAL SKILLS

Programming & Querying: Python, SQL, MySQL

Libraries & Tools: Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook, Git, GitHub

BI & Visualization: Microsoft Excel, Google Sheets, Power BI, Tableau, DAX, Power Query

Analytics & Methodologies: Data Cleaning, Exploratory Data Analysis (EDA), Dashboard Development, KPI Reporting, Business Intelligence, Data Validation, Insight Generation, Cohort Analysis

EXPERIENCE

Data Analyst Trainee | YBI Foundation (Remote) (Dec 2024 – Jan 2025)

- Engineered a customer churn analysis solution using Python, Pandas, and Seaborn on 7,043 telecom records, identifying that 38% of churned users were monthly-contract customers within the first 3 months of tenure.
- Built 6 diagnostic visualizations (heatmaps, histograms, box plots) to segment churn-prone customers and delivered actionable retention recommendations to stakeholders.
- Documented data cleaning workflows, SQL queries, and analytical findings to maintain data accuracy and support reproducible reporting across the team.

PROJECTS

Customer Shopping Behavior Analysis | Python, SQL, Power BI

- Architected an end-to-end analytics pipeline using Python, MySQL, and Power BI to process 3,900 customer transaction records and uncover purchasing patterns and revenue trends.
- Developed interactive dashboards and KPI reports highlighting 33K revenue, 27% subscription rate, and 9.76 average order value to support business performance tracking.
- Identified Clothing as the top-performing category contributing 44.7% of sales and optimized regional targeting through state-level segmentation, delivering actionable insights for retention and inventory planning.

Zepto Inventory Intelligence | SQL, Power BI, Tableau

- Processed and validated 3,732 rows of inventory data using SQL, applying duplicate removal, category standardization, and price conversion to ensure data quality and consistency.
- Executed 8 SQL queries analyzing inventory value, stockout trends, pricing tiers, and promotional performance; built Power BI and Tableau dashboards for stakeholder reporting.
- Flagged Biscuits category with 28.57% stockout rate and average stock depth of 3.81 against a target benchmark of 5, enabling operational prioritization and restocking recommendations.

B2B SaaS Churn Risk & Customer Health Analysis | Power Query, Python, SQL, Power BI

- Synthesized multi-table account telemetry across 5 CSV datasets; engineered a weighted Customer Health Index (0-100) combining license utilization, billing delays, and support ticket escalations.

- Discovered that a 40% decline in active license usage preceded churn by an average of 47 days; built executive early-warning dashboards to protect an estimated 18-25% of renewal ARR.

Telecom Customer Churn Diagnostic Analysis | *Python, Pandas, Seaborn, Matplotlib*

- Audited demographic, contract, and billing variables across 7,043 customer accounts; isolated high-risk churn indicators across monthly payment cycles.
- Delivered actionable customer retention playbooks and interactive statistical visualization models for executive leadership.
